

About EeziRider Products

EeziRider branded products was developed for the specialist installer. This product is intended for the high-end customer that wants quality and support from a dealer. It is not sold to public nor are these installers allowed to sell it to the public as DIY. To buy these products you would have to be a qualified and approved installer by the EeziRider team. Your work will be evaluated and your customers will rate your work as our feedback.

As a service to you EeziRider would market the products and installers to our customers. You will also be supported by the developers directly and you may request custom firmware and hardware to ease installation hassles on your side. EeziRider products is also the leading platform for new development. This means you may get features or new products before it is implemented on the other brands. Some features may even only reside in EeziRider products.

Current products available are Eezi4 ECU, Eezi5 TCU, Eezi6 ECU. Others will follow soon like Eezi8, Dashboard Displays, Throttle by Wire, Boost Control and Cam control etc. These products are compatible with the two wiring patterns based on the Mercury and Venus products. There may be slight variations as the EeziRider hardware can change pins to Inputs or Outputs. The hardware is custom assembled for different applications. This result means that the same products may have different drivers to facilitate its application. For example, it may have positive drivers for smart coils or it may have HV Negative drivers for basic coils. Products are not universal but application specific. This means an ECU can't become a TCU. The advantage is less complicated and harnessed don't require electronic components built into them. The result is better protection against harmful interference.

Activation of these product work with credits rather than hardware classes. You will pay a deposit price for the hardware upfront. This includes manufacturing and labor and small profit. Then you buy credits that is loaded onto your login on a portal. Each feature you activate in the software requires a certain number of credits which you then can load onto the device. This means you pay for the features that are used and not for ones that is not used.

To carry inventory may result in a wider range of systems that must be on your shelf but you can take full versions with slight changes to minimize delays for ordering from us. Products may require couple of days to manufacture and test on demand, especially non popular applications. These products can also be upgraded and programmed over the internet but can only load specific programs that the hardware is assembled for.

EeziRider products use standardized EeziTune tuning software through the product range. No need to run different versions for different products. Different applications however have its own software like ECU or TCU etc. This software is free to download from the internet. Old products may also benefit from upgrades to the latest firmware and software. Some cases may require a fee.

EeziRider also has Bluetooth Android capability to allow tuning from mobile phones. This is also helpful to diagnose systems remotely if need be. It has a data logger that can record engine diagnostics to be sent to the installer. It has display capabilities for customer pleasure and diagnostic.

Guarantee

EeziRider comes with a limited 1-year guarantee which is based on loyalty as well. In some cases, a fee may be charged or not regardless of the 1-year. In other cases, an older system may be repaired or upgraded free of charge. T's & C's apply.
